Dreams
and Their Interpretation

Of all phases of human experience, dreams are unquestionably the earliest. With the dawn of intelligence, man began to dream, and from the problems that surrounded him.

Omnipresence, or division by dreams, was used in connection with ancient oracles, where measures were taken to induce such visions. Spontaneous dreams were frequently accepted as revelations among nearly all the races of antiquity, often with inspirational or instructive results.

The combined findings of centuries of dream interpretation were summarised by Artemidorus, a Greek author, about the year A.D. 150. His four-volume opus, which, with the first "dream dictionary," was criticised for the breadth of its sales, which were too liberal that any dream could signify almost anything.

During the centuries that followed, this defect was gradually corrected, and by modern times dreams had become rather well defined, though the authority behind them was open to question. Some interpretations were traditional; others, the results of guesswork; still more, the combinations of personal experiences.

Then along came Freud, with new and startling theories of dreams and their causes, backed by innumerable examples. He school established the sex motif as fundamental to dream interpretation. This rose to popularity during the early 1900's, only to produce disagreement among Freudians themselves, as well as opposition from outside sources.

It was generally conceded that Freud's methods of analysis applied to psychoneurotic patients whose waking lives were replotted with ideas and symbols that carried into their dream experiences. But such people were a minority, whose dreams could be regarded as the exceptions rather than the rule.

Freudian Joseph Breuer epitomised the general criticism with the statement: "What Freud does not sufficiently recognise is that dreams do not all follow similar causes because dreams have different psychologies."

This was backed by extensive studies of thousands of dreams which could only be explained by Freudian findings. Many psychologists came to suppose that the symbolism in dreams may express some direct purpose, rather than serve as the concealment of some suppressed desire. All this is getting back to the days of Artemidorus, when every dream could mean almost anything. However, one can be reassured by the knowledge that the symbolism in dreams is a matter of common experience, and that it should be considered a normal and natural phenomenon.

1. Dreams of Affluence. Here, the dreamer gains or finds some prize, money, or fortune, though it may be fake. A nice type, but disappointing upon awakening.

2. Dreams of Frustration. Here, the dreamer can be trying to catch a plane, or pack a trunk, or find his car, all to no avail. He may need to re-examine his priorities, but have no way of getting it. Awakening from such dreams is a relief indeed.

3. Dreams of Travel. The dreamer may be going places, or simply flying through the air, or off into space. This may indicate a desire for freedom or an eagerness to possess something.

4. Dreams of Falling. These are often fairly simple. The dreamer falls from a cliff or over Niagara Falls, generally waking before landing. Now, you can fall from skyscrapers, bridges, and airplanes in these temporary dreams.

5. Dreams of Being Chased. Here, the pursuing force can be a person, an animal, a hood, an avalanche, or anything big or deadly. This may be traced to some hidden fear, symbolised by the menace in the dream.

6. Dreams of Being Trapped. These dreams often involve a cell, a cave, a prison, or whatever else the dreamer would like to be out of. Similarly are dreams of an impending danger, such as an explosion, the cold-
7. Dreams of Lacking: Clothing. Such dreams have varied interpretations, including frustration on the part of the dreamer. Akin to these are dreams of failing in examinations, forgetting appointments, or other examples of personal oversight or inattention.

Other dreams, such as those of water, fire, hunger, or even food, all are traceable to fear, frustration, or desire. They may also be the result of physical impotency. The singing of a bell may indicate that a person's subconscious, causing him to dream of sex or sexual things may induce a food dream. In such dreams, there is an element of interpretation.

On the contrary, dreams of a prophetic or telepathic nature have been recorded, wherein dreamers have "witnessed" scenes, "real" headlines pertaining to disasters, or have been "told" the name of a horse that turned out to be a winner. These are often too rare and few between to be judged accurately, but they constitute an intriguing phase of dream experience.

All this adds up to the fact that many dreams are general patterns. That was the opinion of the old-time dream interpreters, and modern psychologists concur to a notable degree. In some instances, the result has actually been cyclical, with the newer interpretations coming around to a close approximation of the old. With others, the differences are more marked.

Some older dreams have lost their former significance. Today, people do not dream of wagons, sleighs, belts, harnesses and such. Some listings have been dropped. In contrast, airplanes, automobiles, and other features of modern progress have become highly important as dream material, and have been so listed. It should also be noted that there have been marked changes in the social viewpoint since the days of Freud. Many values and limitations have been learned during the years between. Thus the psychological interpretations of dreams have undergone a change as radical as those of the traditional type.

One popular phase that has persisted is the translation of dreams into numbers, usually of one, two, or three figures. Such numbers are often regarded as lucky, and have been listed with the dream interpretations, though they do not belong there, as they belong more in the field of numerology than in astrology.

With CLOUD, the significant numbers are 33634, 6997, 586, 34, and 7. In this case, there was no need for figure substitutions because no zeros appeared.

But the “0” to “1” is well illustrated with:

\[
\begin{array}{cccccc}
P & U & R & S & E \\
7 & 3 & 9 & 1 & 5 \\
1 & 2 & 0 & 6 \\
3 & 3 & 7 \\
6 & 0 \\
7
\end{array}
\]

Here, beginning with 73915, we had \(7 + 3 = 10\). Being the first figure, the “1” was used instead of “0.” But with the \(9 + 1 = 10\), the “0” was retained.

In the reduction of 1206 to 337, the “0” was treated as “1” to form the 2 + 1 and 1 + 6 resulting in 337.

In the formation of the next number (60) the 3 + 3 = 6 is followed by \(3 + 7 = 10\). So the zero is used for the 60, but in the next reduction it is treated as “1” so that the lone figure, 7, is the result of \(6 + 1\).

This is probably the most logical as well as the most practical system for determining so-called “lucky” numbers. It allows for zeros and yet varies the reductions, so that anyone can pick a “lucky” number of one, two, or three figures, which seem to be the types most wanted in terms of dream interpretation.

Most other systems are not only illogical, but sometimes incoherent. With this one, you can form your own numbers as required and test them accordingly. But they should be regarded as “significant” rather than “lucky.”

With simple three-letter words, the full interpretation is used to obtain the three-figure number. Others reduce as already described. For example:

\[
\begin{array}{cccc}
B & O & Y \\
2 & 6 & 7 \\
8 & 3 \\
1
\end{array}
\]
